Reasons for Allowance

1. Claims 1-14 are allowed as the prior art does not teach or suggest the applicant's invention.

Independent claims 1 and 9 teach a method and corresponding apparatus for writing product servo sectors to a disk of a disk drive. The distinguishing elements of the claims include all the following steps and components:

- (a) using the head internal to the disk drive to read the high frequency signal in the spiral tracks to generate a position error signal used to maintain the head along a substantially circular target path;
- (b) using the head internal to the disk drive to read the sync marks in the spiral tracks to generate a spiral sync mark detect signal;
- (c) generating a coarse timing recovery measurement in response to the spiral sync mark detect signal;
- (d) generating a fine timing recovery measurement in response to the high frequency signal in the spiral tracks;
- (e) synchronizing a servo write clock in response to the coarse timing recovery measurement and the fine timing recovery measurement; and
- (f) using the servo write clock and the head internal to the disk drive to write the product servo sectors along the circular target path.
